## Personal Statement

I am a skilled Technical Designer with a passion for blacksmithing, fencing and video games. My greatest strength is my ability to code and drive to make every process efficient and hassle free. This not only cuts down on the time it takes to complete a task, but also decreases the chance of error. I have honed and utilised this skill to speed up repetitive tasks where appropriate.

I also have an excellent working knowledge of different materials and processes, including experience with casting polyurethane, water-jet cutting porcelain as well as CNC operations involving aluminium and steel products. I have used both FDM and SLA 3D printers for prototyping and I put this knowledge to good use when approaching a problem, drawing upon my experience to find a practical and comprehensive solution.

## Experience

*Technical Designer at Trimline Group (2024 -Current)*

At Trimline I ensure technical drawings are completed rapidly and accurately. I have designed macros to work with Solidworks, resulting in 83% of drawings be completed on the same day they were requested. Moreover, it resulted in a substantial increase in accuracy and clarity.

I also created the Building Specification Library, complete with accurate textures and technical data which aided in several high value contracts, and ensured it suited NHBC waterproofing standards. Waterproofing for both interior and exterior applications was a key focus of this, and I worked with our team to make sure our standards were comprehensive and easy to understand.

Recently, I took on more responsibilities, in the form of Google Ads and social media management for Tilers Gear, which I manage as well as my technical responsibilities. I took this on with no prior training and within my first few months have generated an average return of £8 revenue for every £1 spent on ads.

*Graphic Designer at MMS (2023 - 24)*

At MMS I ensure the successful delivery of a range of marketing materials from print banners at the Milwaukee 2024 Stockholm Conference to the Ryobi Deals of the week. I delivered these on time and to a high quality, ensuring the client's marketing campaigns ran without a hitch.

I was able to streamline the production process by creating scripts for Adobe InDesign and Photoshop that resulted in a massive increase in efficiency and also reduced the chance of human error for repetitive projects like business cards.

*Design Engineering Placement at Powerflex (2020-21)*

At Powerflex I designed, manufactured, and marketed new products.. In this time I redesigned and improved many products as well as creating new designs for cars like the Ford KA, Toyota Yaris GR and Aston Martin V8 Vantage.

This involved designing washers, moulds for polyurethane parts and testing to ensure the parts performed properly. These designs were from conception to technical drawing, production, and shipping. Design considerations included extremes of car usage, such as salty water conditions to high temperatures experienced in arid climates, as well as on exhaust components.

## Proficiencies

**CAD Software**

- Solidworks
- Rhino
- Sketchup
- Autodesk Inventor
- AutoCad
- Cura
- Keyshot

**Microsoft Office**

- Word
- PowerPoint
- Excel

**Adobe Creative Suite**

- InDesign
- Photoshop
- Illustrator
- Premiere
- Audition
- Acrobat

**Coding Languages**

- Python
- C++
- JavaScript
- VBA

## Strengths and Skills

- I am a great team player, and enjoy working with marketing, sales and manufacturing to ensure the best result.
- I have a wide range of skills and experiences from which to draw upon.
- I can communicate effectively and efficiently to ensure a clear outcome is agreed and understood.
- I continually iterate my approach to a problem in order improve the result.
- I can work to a tight deadline, ensuring quality goods in those critical moments.
- I am great at handling extra responsibility and taking on roles that are challenging and unique.
- I have a strong attention to detail and can spot areas for improvement and those crucial final details.
- I am an excellent problem solver, and relish the chance for a new challenge.
- I am strongly motivated, and driven to succeed
- I am a fast and dedicated learner, able to adapt on the fly and respond quickly.
- I can lead a group of people and delegate tasks effectively and efficiently when needed.
- I use coding when appropriate to reduce errors and increase speed.
- I am good at balancing speed with outcomes.

## Qualifications

**Product Design Engineering BSc (Brunel University)**
Included modules in Computer Aided Design, Environmental Design, Electrical Hardware, Coding, Design for Manufacture and FEA.

**4 A-Levels Graded A*-C**
Maths, Computer Science, Physics and Design Technology.

**11 GCSEs A*-B**
Including an A* in Maths and B in English Language.

**Full UK Driving License**
With Access to car.
